

IP Phone

The Iwatsu IP Phone can be connected to your existing ADIX telephone system or your new Enterprise-CS telephone system to allow for seamless integration between your main office and your remote or home office locations.

Iwatsu has put a new twist on connectivity. Packed with a whole lot of IP punch, the Iwatsu IP Phone enables users to stay connected with complete access to the ADIX system feature set from anywhere in or out of the office by simply connecting the phone to an IP network locally or remotely.

Additionally, the Iwatsu IP Phone includes a built-in layer 2 switch for connection to another network device such as a PC or printer, and an integrated web server that provides a browser-based programming interface for simplified administration.

A NEW TWIST

ON CONNECTIVITY

IWATSU

**TOOLS THAT EVOLVE FASTER
THAN YOUR BUSINESS**

Along with the convenience of automatic set relocation, the Iwatsu IP Phone is complete with a backlit LCD with three menu keys for simplified call feature access, a maximum of 24 fully programmable multipurpose keys with red and green LEDs, an integrated headset jack, a standard full-duplex speakerphone and three separate volume keys to individually control handset/headset, ringer and speaker volume settings.
